

Polio Sabin™ One and Three (oral)

Polio Sabin™ Один и Три (пероральная)

DESCRIPTION

Polio Sabin™ One and Three (oral), oral suspension
Bivalent Oral Poliomyelitis vaccine Types 1 and 3 (bOPV)

Polio Sabin™ One and Three (oral) is a bivalent, live attenuated poliomyelitis virus vaccine of the Sabin strains Type 1 (Lsc, 2ab) and Type 3 (Leon 12a, 1b), propagated in MRC5 human diploid cells.

Each dose (0.1 ml) contains not less than $10^{6.0}$ CCID₅₀ of Type 1 and $10^{5.8}$ CCID₅₀ of Type 3.

Excipients: Magnesium chloride, L-arginine, polysorbate 80 and water for injections.

Neomycin sulphate, polymyxin B sulphate and phenol red are present as residuals from the manufacturing process.

ADMINISTRATION

Polio Sabin™ One and Three (oral) is for oral use only (see also sections *Immunization Schedule and Precautions*).

One dose of vaccine (0.1 ml) is contained in two drops which are delivered from the polyethylene dropper supplied with the multidose container.

The vaccine may be administered alone or mixed with beverages or foods provided that these do not contain substances that may inactivate polioviruses, such as preservatives. Suitable vehicles are simple syrup, milk, bread and a lump of sugar. Since the vaccine has a bitter salty taste, it may be given in syrup or on a lump of sugar, particularly when it is to be given to young children.

The vaccine should be administered to breast-fed infants, preferably two hours before or after breast-feeding in order to avoid contact with the antibodies present in the breast milk. Care should be taken not to contaminate a multidose dropper with saliva of the vaccinee. The vaccine is presented as a clear liquid, yellowish to pink suspension.

Due to minor variation of its pH, **Polio Sabin™ One and Three (oral)** may vary in colour from yellow to pink. Changes of the colour of the vaccine within this range do not signify deterioration of the vaccine.

Vaccines should be inspected visually for any particulate matter prior to administration.

Multidose vials of **Polio Sabin™ One and Three (oral)** from which one or more doses of vaccine have been removed during an immunization session may be used in subsequent immunization sessions for up to a maximum of 4 weeks, provided that all of the following conditions are met (as described in the WHO policy statement: The use of opened multidose vials in subsequent immunization sessions. WHO/V&B/00.09):

- The expiry date has not passed;
- The vaccines are stored under appropriate cold chain conditions;
- The vaccine vial septum has not been submerged in water;
- Aseptic technique has been used to withdraw all doses;
- The vaccine vial monitor (VVM), if attached, has not reached the discard point

When distribution or administration is not imminent, it is advisable to store the vaccine, if possible, at temperatures of -20°C or lower since this halts deterioration in vaccine potency.

If the vaccine has been accidentally exposed to high environmental temperatures, it is recommended that the vaccine be used immediately or stored ideally at -20°C or at $2\text{--}8^{\circ}\text{C}$ until administration under condition that the VVM allows its use.

IMMUNIZATION SCHEDULE

Polio Sabin™ One and Three (oral) is indicated for active immunisation in all age groups against infection caused by poliomyelitis viruses of Type 1 and 3.

In a multidose container, one immunising dose (0.1 ml) is contained in two drops.

The advised vaccination schedule for each country must be in accordance with the national or WHO recommendations.

Polio Sabin™ One and Three (oral) can be administered at the same time as *Haemophilus influenzae* type b vaccine, hepatitis B vaccine, diphtheria, pertussis and/or tetanus vaccine, inactivated polio vaccine (IPV), measles, rubella and/or mumps vaccine, yellow fever vaccine or BCG vaccine if this fits into the vaccination schedule.

Concomitant administration of oral poliomyelitis vaccine (OPV) and rotavirus vaccine does not affect the immune response to the polio antigens but may slightly reduce the immune response to rotavirus vaccine. A clinical trial involving more than 4200 subjects who received trivalent OPV concomitantly with GlaxoSmithKline Biologicals' rotavirus vaccine (*Rotarix™*) showed that clinical protection against severe rotavirus gastro-enteritis was maintained.

If **Polio Sabin™ One and Three (oral)** cannot be given at the same time as other live attenuated vaccines, an interval of at least one month should be left between both vaccinations.

Immunosuppressive treatment may reduce the immune response, may favour the multiplication of the vaccine viruses and may increase the length of excretion of the vaccine viruses in the stools.

SIDE EFFECTS

Very rarely, vaccine-associated paralysis has been observed with trivalent oral poliomyelitis vaccines (less than one case per 1 million doses administered). The majority of vaccine associated paralytic poliomyelitis (VAPP) occurred after the administration of the first dose.

Fever, vomiting and diarrhoea have been observed after immunisation with **Polio Sabin™ One and Three (oral)**. Allergic/anaphylactoid reactions have been described after immunisation with GlaxoSmithKline Biologicals' trivalent oral poliomyelitis vaccine.

CONTRAINDICATIONS

Polio Sabin™ One and Three (oral) is contraindicated in subjects with known hypersensitivity to neomycin or polymyxin, or to any other component of the vaccine. A history of contact dermatitis to neomycin or to polymyxin is not a contraindication.

Polio Sabin™ One and Three (oral) is contraindicated in subjects having shown signs of hypersensitivity after previous administration of GlaxoSmithKline Biologicals' oral poliomyelitis vaccines.

Polio Sabin™ One and Three (oral) is contraindicated in subjects suffering from primary and secondary immunodeficiencies. For those persons it is recommended to use an inactivated polio vaccine (IPV). However, according to the WHO Expanded Programme on Immunisation (EPI) recommendations symptomatic and asymptomatic infection with human immunodeficiency virus is not a contraindication for immunisation with **Polio Sabin™ One and Three (oral)**.

PRECAUTIONS

Polio Sabin™ One and Three (oral) should under no circumstances be injected.

Polio Sabin™ One and Three (oral) may not prevent or modify the course of the disease in subjects already infected with a wild Type 1 or Type 3 poliovirus.

The administration of **Polio Sabin™ One and Three (oral)** should be postponed in subjects suffering from acute severe febrile illness, or persistent diarrhoea or vomiting. However, the presence of a minor infection, such as a cold, should not result in the deferral of vaccination. Since diarrhoea and/or vomiting (as well as gastro-intestinal infection) may interfere with the administration of **Polio Sabin™ One and Three (oral)**, the dose received will not be counted as part of the immunisation schedule and should be repeated after recovery.

The attenuated poliomyelitis viruses multiply in the gut. The faecal excretion of the vaccine viruses may persist for several weeks and may also be transmitted to the contacts of the vaccinees; contacts of vaccinees should therefore be warned about the need for strict personal hygiene. Non-immune persons in close contact with a recently vaccinated subject may very rarely be at risk of vaccine-associated paralytic poliomyelitis.

Whenever **Polio Sabin™ One and Three (oral)** is administered to an individual, it is good clinical practice to offer immunisation to susceptible close contacts (such as unvaccinated parents) at the same time.

As with any vaccine, a protective immune response may not be elicited in all vaccinees. Previous vaccination with IPV is not a contraindication for the use of **Polio Sabin™ One and Three (oral)**.

Pregnancy

Although there is no evidence that live attenuated polioviruses have an adverse effect on the foetus, in accordance with general principles, the vaccine should not be given to pregnant women unless they are exposed to a definite risk of infection with wild polioviruses. The risk/benefit of the use of the vaccine should be evaluated in comparison to the use of inactivated polio vaccines.

Lactation

The effect on breast-fed infants of the administration of **Polio Sabin™ One and Three (oral)** to their mothers has not been evaluated in clinical studies. No known contra-indication has been established. The vaccine may be administered to a lactating mother.

Women of childbearing potential/ Contraception

Women of childbearing age without immunity to polio should use contraception during 3 months following vaccination.

Overdose

Occasional reports of overdose with GlaxoSmithKline Biologicals' trivalent oral poliomyelitis vaccine have been received. Overdose has not resulted in ill-effects.

Insufficient data on **Polio Sabin™ One and Three (oral)** are available.

Incompatibilities

This medicinal product must not be mixed with other medicinal products.

PHARMACOLOGICAL PROPERTIES

For this section, see WHO Product Information on the WHO website.

STORAGE

The expiry date is indicated on the label and packaging.

The vaccine is potent if stored at not higher than -20°C until the expiry date indicated on the vial. It can be stored for up to six months between $+2^{\circ}\text{C}$ and $+8^{\circ}\text{C}$.

In order to preserve optimal potency of **Polio Sabin™ One and Three (oral)**, exposure of the vaccine to ambient (non-refrigerated) temperatures should be kept to a minimum and exposure to sunlight should be avoided.

Shipment should be done under refrigerated conditions, particularly in hot climates.

Freezing and thawing does not affect the titre of the vaccine.

Store in the original package in order to protect from light.

PRESENTATION

The vaccine is presented in glass vials (multidose vials containing 10 doses or 20 doses).

Vaccine Vial Monitor (see VVM pictogram at the end of the leaflet)

The Vaccine Vial Monitor (VVM) is part of the label used for all **Polio Sabin™ One and Three (oral)** batches supplied by GlaxoSmithKline Biologicals. The colour dot that appears on the label of the vial is a VVM. This is a time-temperature sensitive dot that provides an indication of the cumulative heat to which the vial has been exposed. It warns the end user when exposure to heat is likely to have degraded the vaccine beyond an acceptable level.

The interpretation of the VVM is simple. Focus on the central square. Its colour will change progressively. As long as the colour of this square is lighter than the colour of the ring, then the vaccine can be used. As soon as the colour of the central square is the same colour as the ring or of a darker colour than the ring, then the vial should be discarded.

The interpretation of the VVM is simple. Focus on the central square. Its colour will change progressively. As long as the colour of this square is lighter than the colour of the ring, then the vaccine can be used. As soon as the colour of the central square is the same colour as the ring or of a darker colour than the ring, then the vial should be discarded.

It is absolutely critical to ensure that the storage conditions specified above (in particular the cold chain) are complied with. GlaxoSmithKline Biologicals will assume no liability in the event **Polio Sabin™ One and Three (oral)** has not been stored in compliance with the storage instructions.

Furthermore GlaxoSmithKline Biologicals assumes no responsibility in case a VVM is defective for any reason.

For further information, please contact the manufacturer.

Polio Sabin and Rotarix are trade marks of the GSK group of companies.

DESCRIPTION

Polio Sabin™ One and Three (oral), suspension buvable

Vaccin antipoliomyélitique oral bivalent Types 1 et 3 (bOPV)

Polio Sabin™ One and Three (oral) est un vaccin antipoliomyélitique oral bivalent contenant des souches virales vivantes atténuées de Type 1 (Lsc, 2ab) et de Type 3 (Leon 12a, 1b), multipliées sur cellules diploïdes humaines MRC5.

Chaque dose (0,1 ml) contient au moins $10^{6.0}$ TCID₅₀ de Type 1 et $10^{5.8}$ TCID₅₀ de Type 3.

Excipients : chlorure de magnésium, L-arginine, polysorbate 80 et eau pour préparations injectables.

Résidus du procédé de fabrication : sulfate de néomycine, sulfate de polymyxine B et rouge de phénol.

ADMINISTRATION

Polio Sabin™ One and Three (oral) doit être administré exclusivement par voie orale (voir aussi rubriques Schéma de vaccination et Précautions).

Une dose de vaccin (0,1 ml) est contenue dans deux gouttes délivrées par le compte-gouttes en polyéthylène fourni avec le récipient multidose.

Le vaccin peut être administré seul ou mélangé à des boissons ou à des aliments, à condition que ces derniers ne contiennent pas de substances susceptibles d'inactiver les poliovirus, telles que des conservateurs. Le vaccin peut être mélangé dans du sirop ou du lait, ou encore versé sur un morceau de pain ou de sucre. Compte tenu de son goût salé et amer, le vaccin peut être administré dans un sirop ou sur un morceau de sucre, surtout s'il doit être donné à un jeune enfant.

Lorsque **Polio Sabin™ One and Three (oral)** est administré à un individu, les bonnes pratiques cliniques prévoient de proposer à ses proches (ses parents non vaccinés, par exemple) une vaccination simultanée.

Comme pour tout vaccin, une réponse immunitaire protectrice peut ne pas être obtenue chez tous les sujets vaccinés.

Une vaccination antérieure avec un VPI ne constitue pas une contre-indication à l'utilisation de **Polio Sabin™ One and Three (oral)**.

Grossesse

Malgré l'absence de preuves d'un quelconque effet délétère des poliovirus vivants atténués sur le fœtus, le vaccin ne sera pas administré à la femme enceinte, conformément aux principes généraux, à moins qu'elle soit exposée à un risque précis d'infection par des poliovirus sauvages.

Le rapport risque/bénéfice de l'utilisation du vaccin sera comparé à celui de l'utilisation d'un vaccin antipoliomyélite inactif.

Allaitement

Le effet produit sur les nourrissons allaités suite à l'administration de **Polio Sabin™ One and Three (oral)** à leur mère n'a pas été évalué dans le cadre d'études cliniques. Aucune contre-indication connue n'a pu être établie.

Femmes en âge de procréer/Contraception

Les femmes en âge de procréer non immunisées contre la poliomyélite doivent utiliser un moyen de contraception pendant les 3 mois qui suivent la vaccination.

Surdosage

Des notifications occasionnelles de surdosage de vaccin antipoliomyélitique oral trivalent de GlaxoSmithKline Biologicals ont été signalées. Le surdosage n'a pas entraîné d'effets nocifs. On ne dispose pas de données suffisantes sur **Polio Sabin™ One and Three (oral)**.

Incompatibilités

Ce médicament ne doit pas être mélangé à d'autres médicaments.

PROPRIÉTÉS PHARMACOLOGIQUES

Voir la Notice OMS disponible sur le site web de l'OMS.

CONSERVATION

La date de péremption est indiquée sur l'étiquette et sur l'emballage.

Le vaccin est efficace s'il est conservé à une température inférieure ou égale à -20°C jusqu'à la date de péremption indiquée sur le flacon. Il peut se conserver jusqu'à six mois à une température comprise entre $+2^{\circ}\text{C}$ et $+8^{\circ}\text{C}$.

Le programme de vaccination conseillé pour chaque pays doit être conforme aux recommandations formulées au niveau national ou au niveau de l'OMS.

Si le vaccin est exposé accidentellement à des températures ambiantes élevées, il est recommandé de le refroidir rapidement.

Si le vaccin est exposé accidentellement à des températures ambiantes (non réfrigérées) et d'éviter de l'exposer à la lumière du soleil.

Le transport se fait exclusivement en conditions réfrigérées, en particulier dans les régions à climat chaud.

La congélation et la décongélation n'affectent pas le titre du vaccin.

Siempre que **Polio Sabin™ One and Three (oral)** sea administrada a un individuo, es una buena práctica clínica ofrecer la inmunización a contactos cercanos susceptibles (como padres no vacunados) al mismo tiempo.

Al igual que con cualquier vacuna, puede que no se produzca una respuesta inmune protectora en todas las personas vacunadas.

La vacunación previa con IPV no es una contraindicación para el uso de **Polio Sabin™ One and Three (oral)**.

Embarazo

Aunque no hay evidencia de que los poliovirus vivos atenuados tengan un efecto adverso en el feto, de acuerdo con los principios generales, la vacuna no debe administrarse a mujeres embarazadas a menos que estén expuestas a un riesgo evidente de infección por poliovirus salvajes. La relación riesgo-beneficio de la vacuna debe evaluarse en comparación con el uso de vacunas antipoliomielíticas inactivadas.

Lactancia

El efecto en los lactantes de la administración de **Polio Sabin™ One and Three (oral)** a sus madres no se ha evaluado en ensayos clínicos. No se ha establecido ninguna contraindicación conocida.

La vacuna puede administrarse a las madres lactantes.

Mujeres en edad reproductiva/anticoncepción

Las mujeres en edad reproductiva sin inmunidad contra la poliomielitis deben usar anticoncepción durante 3 meses después de la vacunación.

Sobredosis

Se han recibido informes ocasionales de sobredosis con vacuna antipoliomielítica oral trivalente de GlaxoSmithKline Biologicals. La sobredosis no dio como resultado efectos nocivos.

Hay disponibles datos insuficientes sobre **Polio Sabin™ One and Three (oral)**.

Incompatibilidades

Este medicamento no debe mezclarse con otros medicamentos.

PROPIEDADES FARMACOLÓGICAS

Para esta sección, consulte la Información del producto de la OMS en el sitio web de la OMS.

CONSERVACIÓN

La fecha de caducidad está indicada en la etiqueta y en el empaque.

La vacuna es potente si se conserva a no más de -20°C hasta la fecha de caducidad indicada en el frasco. Puede conservarse hasta por seis meses entre +2°C y +8°C.

Para preservar la potencia óptima de **Polio Sabin™ One and Three (oral)**, la exposición de la vacuna a temperaturas ambiente (no refrigerada) debe mantenerse al mínimo y debe evitarse la exposición a la luz solar.

El envío debe realizarse en condiciones de refrigeración, especialmente en climas cálidos.

El congelamiento y descongelamiento no afectan el valor de la vacuna.

Conservar en el empaque original para protegerla de la luz.

PRESENTACIÓN

La vacuna se presenta en frascos de vidrio (frascos multidosis de 10 dosis o 20 dosis).

Monitor del Frasco Ampolla de la Vacuna (ver el pictograma "Vaccine Vial Monitor" (VVM) al final del prospecto)

El Monitor del Frasco Ampolla de la Vacuna (VVM) forma parte ya sea de la etiqueta que se utiliza en todos los lotes de **Polio Sabin™ One and Three (oral)** suministrados por GlaxoSmithKline Biologicals. El punto de color que aparece en la etiqueta del frasco ampolla es un VVM. Se trata de un punto sensible al tiempo y a la temperatura que ofrece una indicación del calor acumulado al que se ha visto expuesto el frasco ampolla. Advierte al usuario final cuán probable es que la exposición al calor haya degradado la vacuna a un nivel del aceptable.

La interpretación del VVM es sencilla. Fíjese en el cuadrado central. Si su color cambiará progresivamente. Siempre y cuando el color de este cuadrado sea más claro que el color del anillo, entonces podrá usarse la vacuna. En cuanto el color del cuadrado central sea el mismo, o más oscuro, que el del anillo, deberá desecharse el frasco ampolla.

Es absolutamente crítico asegurarse de que se cumplen las condiciones de almacenamiento especificadas anteriormente (en particular la cadena de frío). GlaxoSmithKline Biologicals no asumirá ninguna responsabilidad en el caso de que **Polio Sabin™ One and Three (oral)** no se haya conservado de conformidad con las instrucciones de almacenamiento. GlaxoSmithKline Biologicals tampoco asume ninguna responsabilidad en caso de que un VVM esté defectuoso por cualquier razón.

Para más información, póngase en contacto con el fabricante.

Polio Sabin y Rotarix son marcas comerciales del grupo de empresas GSK.

Lactação

O efecto, nas crianças lactentes, da administração da **Polio Sabin™ um e três (oral)** às suas mães não foi avaliado em estudos clínicos. Nenhuma contraindicação conhecida foi estabelecida.

A vacina pode ser administrada a uma mãe lactante.

Mulheres aptas à gestação/contracepção

Mulheres em idade de gestação sem imunização contra a polio devem utilizar contracepção durante três meses após a vacinação.

Overdose

Foram recebidos relatos ocasionais de overdose com a vacina oral trivalente contra a poliomielite da GlaxoSmithKline Biologicals. A overdose não resultou em efeitos de enfermidade.

Dados insuficientes da **Polio Sabin™ um e três (oral)** estão disponíveis.

Recomendou-se a vacinação em cada país deve corresponder ao nacional recomendado ou recomendação.

CRONOGRAFO DE IMUNIZAÇÃO

A **Polio Sabin™ One and Three (para приема внутренне)** é recomendada para a imunização activa em todas as faixas etárias contra a infecção causada pelo vírus da poliomielite dos tipos 1 e 3.

Incompatibilidades

Esse produto medicinal não deve ser misturado com outros produtos medicinais.

PROPRIEDADES FARMACOLÓGICAS

Para esta secção, consulte as informações do produto da OMS no site da OMS.

ARMAZENAGEM

Quando a distribuição ou administração não forem iminentes, aconselha-se armazenar a vacina, se possível, a temperaturas de -20°C ou menores. Dessa forma, a deterioração da potência da vacina é interrompida.

As vacinas devem ser inspecionadas visualmente para verificar se não há nenhum substância estranha.

Overdose

Foram recebidos relatos ocasionais de overdose com a vacina oral trivalente contra a poliomielite da GlaxoSmithKline Biologicals. A overdose não resultou em efeitos de enfermidade.

Dados insuficientes da **Polio Sabin™ um e três (oral)** estão disponíveis.

Recomendou-se a vacinação em cada país deve corresponder ao nacional recomendado ou recomendação.

ХРАНЕНИЕ

В инструкции и на упаковке препарата указан срок годности.

Вакцина сохраняет свою иммуногенность при хранении при температуре не выше -20°C до истечения срока годности, указанного на флаконе. При температуре от +2°C до +8°C вакцина может храниться до 6 месяцев.

Для поддержания иммуногенности **Polio Sabin™ One and Three (для приема внутренне)** на оптимальном уровне следует свести к минимуму хранение вакцины в условиях более высокой температуры, а также держать ее в темном месте.

Доставка вакцины, особенно в жарком климате, должна осуществляться в холодильных устройствах.

Замораживание и размораживание не влияют на тип вакцины.

Для защиты от света храните препарат в оригинальной упаковке.

49/93

Передозировка

Имеются редкие сообщения о передозировке трехвалентной оральной вакцины от полиомиелита GlaxoSmithKline Biologicals'. Передозировка не сопровождалась неблагоприятными явлениями.

На сегодня недостаточно данных о **Polio Sabin™ One and Three (для приема внутренне)**.

Несовместимость

Данный препарат не должен смешиваться с другими лекарственными средствами.

ФАРМАКОЛОГИЧЕСКИЕ СВОЙСТВА

Для ознакомления с данным разделом см. информацию о препарате по данным ВОЗ на веб-сайте организации.

ХРАНЕНИЕ

ВНЕШНИЙ ВИД

Вакцина поставляется в стеклянных флаконах (многодозные флаконы содержат 10 или 20 доз препарата).

Индикатор годности флакона с вакциной (Vaccine Vial Monitor); см. пиктограмму VVM в конце этого листка

Индикатор годности флакона с вакциной (VVM) является частью этикетки, которая

закрывает дно маркированной компанией GlaxoSmithKline Biologicals. Именование на этикетке этого кружка является индикатором VVM. Цвет этого кружка изменяется в соответствии с временем и температурой и является индикатором скобулочного теплового воздействия, которому подвергается флакон. Этот индикатор предупреждает конечного потребителя о возможном распаде вакцины до степени, превышающей допустимую, под действием тепла.

Интерпретация показаний VVM проста. Следует обратить внимание на квадрат в центре кружка. Его цвет постоянно меняется. Пока цвет этого квадрата светлее цвета кружка, вакцина можно использовать. Если цвет центрального квадрата совпадает с цветом кружка или темнее его, флакон следует удалить из отходов.

Совершенно необходимо обеспечить указанные выше условия хранения (особенно при низких температурах). Компания ГлаксоСмитКляйн Байопротектал

использует ответственности, если вакцина **Polio Sabin™ One and Three (для приема внутренне)** хранилась с нарушением этих требований инструкции. Кроме того, компания

Polio Sabin и Rotarix - торговые марки группы компаний GSK.

ОПИСАНИЕ

Polio Sabin™ One and Three (для приема внутренне), суспензия для приема внутренне бивалентная оральная вакцина от полиомиелита 1 и 3 типа (БОВ)

Polio Sabin™ One and Three (для приема внутренне) представляет собой бивалентную живую атenuированную вирусную вакцину Стойна типа 1 (Lsc, 2ab) и типа 3 (Leon 12a, 1b), культивируемую на диплоидных клетках MRC5.

Каждая доза вакцины (0,1 ml) содержит não mais de 10^{6,0} CCID₅₀ tipo 1 e 10^{5,8} CCID₅₀ tipo 3.

Вспомогательные вещества: Хлорид магния, L-аргинина, полисорбат 80 и вода для инъекций. Немоциника сульфат, полимиксина B сульфат и феноловый красный сохраняются в статочных количествах после производственного процесса.

Применение **Polio Sabin™ One and Three (для приема внутренне)** следует отложить у пациентов, страдающих острым тяжелым заболеванием, которое проявляется лихорадкой, а также при устной/ногтевой диарее или рвоте. Однако наличие легкой инфекции, в частности простудного заболевания, не должно стать причиной отказа от вакцинации.

МЕРЫ ПРЕДОСТОРОЖНОСТИ

Polio Sabin™ One and Three (для приема внутренне) не применяется парентерально.

Polio Sabin™ One and Three (для приема внутренне) не является противопоказанием на течение болезни и не предотвращает ее у пациентов, уже инфицированных вирусом полиомиелита дикого типа 1 или 3.

Применение **Polio Sabin™ One and Three (для приема внутренне)** следует отложить у пациент
